

LAB 2 — Online Shopping System using DML Commands

Aim: To perform DML operations on a database designed for an **Online Shopping System** using INSERT, UPDATE, DELETE, and SELECT statements.

```
CREATE DATABASE ONLINE_SHOPPING_DB;    //create database
```

```
USE ONLINE_SHOPPING_DB;        //select the database
```

Create product table

```
CREATE TABLE PRODUCT (  
    Product_ID INT PRIMARY KEY,  
    Product_Name VARCHAR(100),  
    Category VARCHAR(50),  
    Price DECIMAL(10,2),  
    Stock INT  
);  
  
DESC PRODUCT;        //check the structure
```

Output:

Output:

Field	Type	Null	Key	Default	Extra
Product_ID	int	NO	PRI	NULL	
Product_Name	varchar(100)	YES		NULL	
Category	varchar(50)	YES		NULL	
Price	decimal(10,2)	YES		NULL	
Stock	int	YES		NULL	

1. INSERT :

Insert first product

```
INSERT INTO PRODUCT  
VALUES (101, 'Laptop', 'Electronics', 55000.00, 10);
```

Insert second product

```
INSERT INTO PRODUCT
```

```
VALUES (102, 'Headphones', 'Electronics', 2500.00, 25);
```

Insert third product

```
INSERT INTO PRODUCT
```

```
VALUES (103, 'Backpack', 'Accessories', 1500.00, 20);
```

Insert fourth product

```
INSERT INTO PRODUCT
```

```
VALUES (104, 'Smart Watch', 'Electronics', 4000.00, 15);
```

SELECT All columns : Display all products

```
SELECT * FROM PRODUCT;
```

Output

Product_ID	Product_Name	Category	Price	Stock
101	Laptop	Electronics	55000.00	10
102	Headphones	Electronics	2500.00	25
103	Backpack	Accessories	1500.00	20
104	Smart Watch	Electronics	4000.00	15

SELECT specific columns: Display specific products

```
SELECT Product_Name, Price FROM PRODUCT;
```

Output:

Product_Name	Price
Laptop	55000.00
Headphones	2500.00
Backpack	1500.00
Smart Watch	4000.00

2. UPDATE : Suppose the price of the Headphones is increased from ₹2500 to ₹2800.

UPDATE PRODUCT

SET Price = 2800.00

WHERE Product_ID = 102;

[Check the updated record]:

SELECT * FROM PRODUCT

WHERE Product_ID = 102;

Output

Product_ID	Product_Name	Category	Price	Stock
102	Headphones	Electronics	2800.00	25

3. DELETE: Delete the Backpack product from the database.

DELETE FROM PRODUCT

WHERE Product_ID = 103;

SELECT * FROM PRODUCT;

Output

Product_ID	Product_Name	Category	Price	Stock
101	Laptop	Electronics	55000.00	10
102	Headphones	Electronics	2800.00	25
104	Smart Watch	Electronics	4000.00	15

Whole Code:

OneCompiler

Upgrade

AI

MySQL

Run

```
queries.sql x +
1  -- Create
2  CREATE TABLE PRODUCT (
3      Product_ID INT PRIMARY KEY,
4      Product_Name VARCHAR(100),
5      Category VARCHAR(50),
6      Price DECIMAL(10,2),
7      Stock INT
8  );
9  DESC PRODUCT;
10
11 -- insert
12 INSERT INTO PRODUCT
13 VALUES (101, 'Laptop', 'Electronics', 55000.00, 10);
14 INSERT INTO PRODUCT
15 VALUES (102, 'Headphones', 'Electronics', 2500.00, 25);
16 INSERT INTO PRODUCT
17 VALUES (103, 'Backpack', 'Accessories', 1500.00, 20);
18 INSERT INTO PRODUCT
19 VALUES (104, 'Smart Watch', 'Electronics', 4000.00, 15);
20
21 -- select all columns
22 SELECT * FROM PRODUCT;
23
24 -- select specific columns
25 SELECT Product_Name, Price FROM PRODUCT;
26
27 -- update
28 UPDATE PRODUCT
29 SET Price = 2800.00
30 WHERE Product_ID = 102;
31
32 SELECT * FROM PRODUCT
33 WHERE Product_ID = 102;
34
35 -- delete
36 DELETE FROM PRODUCT
37 WHERE Product_ID = 103;
38 SELECT * FROM PRODUCT;
```

Result:

Thus, the DML operations **INSERT, UPDATE, DELETE, and SELECT** were successfully performed on an **Online Shopping System** database using MySQL.
